Performance Report: Ravensmere

Date: 10 September 2026

Ravensmere presents a finely balanced picture across London, matching England on half its 62 indicators while showing encouraging momentum with 39 measures improving.

Ravensmere sits at an evenly balanced point against the England average. Of the 62 indicators assessed, 31 are better than the England average and 31 are worse, with none broadly in line. This mixed standing masks genuine progress beneath the surface, as 39 indicators are improving over time against 21 that are declining. Among London's domains, the area performs most strongly in Age Well, which holds the best average rank of 12.3 of 33, followed by Economy at 15.0 and Education at 17.9.

The area's relative strengths are clear and concrete. Violent crime offences per 1,000 population rank an excellent 2 of 33 across the region. Ravensmere also performs well on inequality in life expectancy at 65 for males (rank 3 of 33), on GCSE attainment in English and maths for disadvantaged pupils at Key Stage 4 (rank 3 of 32), and on emergency hospital admissions due to falls in those aged 65 and over (rank 3 of 33). Inequality in life expectancy at birth for males adds to this picture at rank 4 of 33.

Set against these strengths are several pressing concerns. Domestic abuse-related incidents and crimes, hospital admissions as a result of self-harm among 10-24 year olds, and the under 75 mortality rate from causes considered preventable each rank last in the region at 33 of 33. Life expectancy at birth for females sits at rank 32 of 33, and affordability of home ownership is similarly poor at rank 32 of 33. The Start Well domain, with an average rank of 24.7, warrants particular attention.

Encouragingly, the strongest improvements are substantial: the winter mortality index for those aged 85 plus has fallen by 63.7%, inequality in life expectancy at birth for females by 34.6%, those killed or seriously injured on roads by 28.6%, and hospital admissions for violent crime by 27.6%. However, some measures are moving the wrong way, notably direct payments for adult social care users aged 65 and over (down 18.3%) and aged 18 to 64 (down 14.3%), overall GCSE attainment (down 10.0%), and rising PM2.5 air pollution (up 8.9%). Sustaining the positive momentum while targeting the entrenched concerns in Start Well and preventable mortality should be the priority for the period ahead.

Notes: ● Rank — 1 = best performing London local authority (out of up to 33). Rank accounts for indicator polarity (whether a high or low value indicates better performance). Rank colour: discrete quintile bands (Top 20% = best → Bottom 20% = worst). ● vs England / vs London — percentage difference from comparator. Green = better performance; red = worse performance (polarity-adjusted). ● Change vs Last Year — change between the two most recent time periods. ↑ = improvement; ↓ = deterioration. Green = improvement; red = deterioration (polarity-adjusted). ● Sources: ONS, OHID, NHS England, DfE, NHS Digital, DHSC +11 more.
